

FSC-Certified

Exemplary commitment to the environment.

We have been certified according to the strict requirements of the internationally operating, independent FSC (Forest Stewardship Council). All paper produced by Mitsubishi HiTec Paper Flensburg and Mitsubishi HiTec Paper Bielefeld is allowed to carry the FSC logo. These high-quality products stand for responsible forest management and for dedicated environmental consciousness.

Paper manufacturers live from and with natural resources. Taking care of these resources as well as an environmentally conscious processing of our products are therefore the pillars of our business philosophy. We continue to work on optimising our production and on using existing raw materials more efficiently.

Mitsubishi HiTec Paper stands for highest quality and international service. We operate worldwide and will be happy to put you in touch with your personal contact.

Environmental Protection: Our Commitment – Your Advantage

The environment is an important and frequently discussed topic. It has become a matter of course to live as environmentally friendly as possible. Many users are already paying attention to the ecological sustainability of a product.

If you choose a certified Mitsubishi HiTec Paper product, you are making a valuable contribution to protecting the environment while opting for a clear competitive advantage.

By communicating their commitment to the environment, our customers enhance their positive image as a responsible business, thereby strengthening their market position.

FSC – independent, environmental, consistent

FSC is a non-profit and independent organization to support responsible forest management. FSC specifications define which minimum environmental and social forest management standards have to be met. Amongst other things, they have to guarantee that the basic ecologic function of the wood's eco system is sustained, that protected forest is not cut down, that a balance is striven for between all different groups of people involved, and that fair and safe working conditions are adhered to.

Independent inspectors test adherence to these standards annually. Wood can only be labelled and marketed carrying the FSC logo after the test has been passed successfully.

The FSC is therefore providing a logo to help the consumer recognise responsible and certified forest management.

We have achieved our goal when our products from raw material to finished product meet environmental and sustainability requirements and when this chain (**Chain of Custody**) is traceable and transparent for our customers.

As a prerequisite, people and businesses that are able to influence forest management first have to respect FSC principles and act accordingly.

This includes Mitsubishi HiTec Paper Bielefeld and Mitsubishi HiTec Paper Flensburg – including our customers that decide to purchase FSC-certified products.
