

A special application technology allows safety features to be incorporated even in the case of small print runs.

Innovation for daily life

High-gloss topcoat

Whether in the form of a till receipt or label, tag or price ticket, you come across our thermal papers every day. All over the world. Excellent printability, attention to security features, extreme stability and durability are the yardsticks of our papers.

The new *thermoscript* TS series

As one of the world's leading thermal paper manufacturers, Mitsubishi HiTec Paper is setting new standards with its recently developed TS series. The other outstanding properties of this series include excellent wet abrasion resistance and the possibility of furnishing the paper with safety features even in the case of small print runs.

By virtue of their advantages, the products in the TS series are virtually predestined for demanding applications such as labels and lotteries.

Special features of the TS series:

- > Excellent wet abrasion resistance that predestines the product for use in difficult climatic conditions in particular (e.g. freezer labels).
- > A high-gloss surface that satisfies the highest optical standards.
- > First-rate offset printability (printing process and result).
- > Safety features are also possible in the case of small print runs thanks to special application technology.
- > Durability of up to 10 years thanks to very good resistance properties.
- > Very good scratch protection.
- > Like all our *thermoscript* products, papers in the TS series guarantee excellent print head properties.

Characteristics <i>thermoscript</i>	TS ..57SE	TS ..65SE
Sensitivität:	Standard	High
Printing Speed (varied between):	8 inch / 200 mm per second	up to 12 inch / 300 mm per second
Protection Coating:	full Topcoat	
Stability:	Very good resistance to environmental influences, e.g. heat, moisture, light, lanolin, alcohol, plasticisers, water, etc.	
Image Durability:	10 years *	
Miscellaneous:	Very good scratch protection and very good offset printability; high-gloss surface	

*if storage and handling principles are followed

Available in	Weight (g/sqm)	Caliper (micron)	Applications
<i>thermoscript</i> TS 8057SE	83	87	Label, Gaming
<i>thermoscript</i> TS 8065SE	84	87	Label, Gaming

We use the modular design principle to develop individual solutions for our customers. Papers from the TS series offer extremely good printability and surface gloss.

Please see our technical datasheets for detailed information on product sensitivity, resistance and durability. These and other weights are available from our sales department on request.
