

The Made-to-Measure Carbonless Papers for Digital Printing

Made-to-Measure

Are you looking for carbonless paper that can be printed precisely in the way you need it? Are you seeking paper that you can customise and produce for your requirements – like a tailor cutting material to size for a dressmaker’s dummy? Then take advantage of the benefits of made-to-measure with *giroform* DIGITAL, the paper of the future no matter which side you look at.

More individuality, more expensive?

Purchase agreements, bank transfer slips and medical lab examination reports – forms play a major role in daily life, both in the workplace and beyond. Yet conventional carbonless papers are limited in their uses. High unit counts are easy to produce using offset printing, but it is much more difficult to use blank forms for customised tasks. After all: the lower the print run, the higher the costs per unit for offset printing. Producing small quantities can become very expensive, quickly.

Fits like a glove

The story is completely different for digital printing, where even the smallest volumes can be produced cost effectively. With *giroform* DIGITAL, Mitsubishi HiTec Paper has developed a unique paper for forms management. What’s the difference? *giroform* DIGITAL can be offset printed in advance based on your precise requirements. You can then drop additional information onto the form yourself, all digitally and even in colour where required. The cost benefits of large print runs can suddenly be combined with a second personalisation step – quickly, simply and above all else affordably. It also makes double-sided printing possible. First-class printing results and outstanding running characteristics are guaranteed.

Facts

giroform DIGITAL is suitable for the production of individual, personalised blank forms in groups and individual multipage forms with the highest security requirements. The system has support from well known companies: Mitsubishi HiTec Paper’s *giroform* DIGITAL was the first carbonless paper to gain approval by the Rochester Institute of Technology (USA) for use in both HP Indigo Systems as well as the Kodak Nexpress System. Mitsubishi HiTec Paper is also the world’s only paper maker with carbonless papers certified by the FSC and the Swan label.

Made-to-measure – simple to create. Test the best and request our sample packet
